Mane Ghazaryan

Senior Unity Software Engineer | Mobile Games, LiveOps, Performance & Scalable Systems | 8+ Years

Summary:
Senior Unity engineer with 8+ years building and shipping games in Unity and C#. I take ownership beyond my tasks: I propose architecture, workflow and product improvements, align them with management, and see them through. Strong in modular architecture, performance optimization, Unity tooling and team processes, with a background in physics and applied mathematics..

Yerevan, Armenia

- Russian (C2)
- Armenian (Native)

Key Strengths

- Ownership: identify improvements, agree priorities with management and the CTO, and deliver them end to end.
- Architecture: modular, SOLID-based systems that stay easy to extend and maintain.
- Team leadership: technical interviews, code review, mentoring, Git workflow and task planning.
- Performance: profiling-driven optimization, asset and build optimization for low-end devices.

EXPERIENCE

Concept Studio | Senior Unity Developer

2023 – Present |NG Slots, a large-scale mobile casino game with continuous LiveOps updates

Architecture & ownership

- Proposed and led architecture changes that made the game modular: per-game prefabs and Asset Bundles, with each minigame as its own Unity package and Git submodule.
- Calculate game probabilities and balancing for casino mechanics.
- Drive a backlog of technical improvements, agreeing priorities with management and the CTO.

Team & process

- Conduct technical interviews for new developers.
- Set up the team's Git workflow (feature branches, pull requests, code review before merge); review code and mentor developers.
- Plan and distribute tasks based on each developer's strengths and delivery speed.
- Introduced AI tools into the company's development and code review workflow.

Skills

Unity & Mobile Development

- C# · iOS & Android
- Clean architecture, SOLID, design patterns
- Data structures & performance-oriented algorithms
- Mobile build pipeline (IPA / APK / AAB), signing & releases
- Client-server architecture
- Async/await & multithreaded workflows
- Asset Bundles & Addressables
- Unity Editor Tooling
- TextMeshPro

LiveOps & Production

- LiveOps & post-launch support
- Crash & ANR investigation
- Remote config & A/B testing
- Monetization (Ads, IAP, Subscriptions)

Performance & Stability

- Sprite atlases, texture and audio compression, build size optimization
- Unity Profiler (CPU / GPU / Memory)
- Deep Profiler

Performance & tooling

- Led a profiling-driven optimization initiative: reduced lobby popup P95 frame time by ~15% and the TMP fallback font atlas from 880 to 214 glyphs.
- Built Unity Editor tools: Profiler CSV exporter (P95, worst-frame analysis), TextMeshPro optimization and localization tooling, and a dev/release build configuration tool that replaced a manual pre-build checklist.
- Proposed CI/CD approaches, including Unity Cloud Build, for the build pipeline.
- Created reusable Unity packages for custom rewarded ads and runtime memory monitoring.

LiveOps

- Build and support LiveOps features, backend-driven systems and production releases; investigate crashes, ANRs and performance regressions.

Frismos | Unity Developer

2018 – 2023 | Dog Town (IOS, Android), Cat Town, Fish Adventure Seasons, Birdland Paradise . Hide and Seek (Roblox)

Gameplay & Systems Development

- Proposed game design and user flow improvements; a full sprint was dedicated to features I suggested.
- Built core gameplay systems: 3D character behavior (navigation, animation controllers, custom shaders), object interactions, VFX and 2D/3D UI.
- Implemented backend components in PHP and MySQL for player data, feature flags and progression.
- Developed multiplayer Roblox gameplay in Lua: player state management, disguise mechanics and session synchronization.
- Integrated ads, analytics and A/B testing SDKs (Unity Ads, AdMob, Facebook, Firebase).

Projects

- **Ayb: Armenian from zero** (live web app) · maneghazaryan.github.io/ayb: designed, built and published a free app that teaches Russian speakers the Armenian alphabet and reading from scratch.
- **Puzzles** (live web games) · maneghazaryan.github.io/puzzle-games: ten logic puzzles in one app, including Minesweeper, Sudoku, Queens, Tetris and Japanese Crossword, for phone and desktop.
- **Tower Jump** (live web game) · maneghazaryan.github.io/tower-jump: an Icy Tower-style vertical climber built around speed and momentum.
- **Freelance Unity development** (alongside full-time roles): small games, including a word scramble puzzle and hyper-casual games, and AI driving behavior for a car simulation.
- **Chess** (WPF and Unity): player vs. AI with configurable search depth.
- **MPI (C++):** parallel Shell sort optimization running on a cluster.

- Frame Debugger
- Memory Profiler
- Performance & memory optimization (low-end devices)
- Frame stability, load time & runtime efficiency

Backend & Data

- SQL / MySQL
- PHP-based backend services
- Backend feature integration & data flow design

SDKs & Services

- Firebase (Analytics, Remote Config, A/B Testing, Crashlytics, Messaging, Realtime DB, Firestore, Storage)
- AppLovin mediation, Unity Ads, AdMob
- Facebook SDK
- Unity Analytics, Unity CCD

Tools

- Git, Bitbucket, GitHub
- Jira, Trello, Confluence
- Sourcetree
- Bugsnag, Crashlytics, Smartlook

EDUCATION

National Polytechnic University of Armenia
Yerevan, Armenia

Master's Degree in Informatics and Applied Mathematics
2019 – 2021

Bachelor's Degree in Physics and Applied Mathematics
2015 – 2019
